

the surface maps throughout the period shows the intermittent character of the precipitation. At any given time precipitation was quite spotty and the precipitation areas could easily be tracked moving from west to east (see table 1 and figs. 3A, 4A, and 5A). The assumption that the precipitation was associated with the ascending motion which could be deduced between the two jet streams seems therefore tenable.

#### ACKNOWLEDGMENTS

The authors wish to thank the staff members of NAWAC who assisted in the preparation of this paper and the members of the Daily Map Unit who drafted the figures.

## Mariners Weather Log

A new bi-monthly publication containing meteorological information for the maritime industry, including weather and shipping on the Great Lakes as well as oceanic areas, recently began issuance under the title *Mariners Weather Log*. The first issue was dated January 1957. Each issue usually contains two major articles and several smaller contributions of current maritime interest. Recent ocean weather is described and a table of selected ship gale observations is included. Annual subscription, \$1.00; additional for foreign mailing, 25¢; 20¢ per copy. Orders should be addressed to Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C.
